PROFILE

Backend engineer with 2+ years building high-throughput FinTech infrastructure at Digiledge, including a live RBI-compliant Central Bank Digital Currency (CBDC) platform, a SoftPOS payment system, and a B2B marketplace. Core strengths: distributed systems in Go and Java, event-driven architectures with Apache Kafka, and containerized deployments on Kubernetes. Delivered a 40% boost in transaction processing throughput through Kafka-based architecture redesign. Equally comfortable owning the backend stack end-to-end and collaborating on cross-platform (iOS/Android) SDK development.

EXPERIENCE

Digiledge

01/2024 – Present | Bangalore, India

Software Engineer

1. CBDC (Central Bank Digital Currency) — RBI Digital Rupee Platform

- Designed and owned backend services in Go for real-time digital currency transaction processing, aligned with RBI CBDC architecture guidelines — handling token issuance, transfer, and redemption flows.
- Architected Apache Kafka event-driven pipelines that decoupled transaction ingestion from validation, improving throughput by 40% and enabling horizontal scaling under peak load.
- Built RESTful APIs for token lifecycle management, transaction validation, and secure digital payment processing, consumed by mobile clients and banking partner systems.
- Reduced DB query latency by ~30% by introducing Redis caching for frequently accessed token states and session data, measurably lowering database load under high transaction volumes.
- Collaborated with banking partners to integrate encrypted end-to-end transaction flows into native iOS (Swift/Objective-C) and Android (Java) applications.

2. Marketplace — B2B Partner Integration Platform

- Engineered scalable microservices in Java (Spring Boot) powering a B2B marketplace ecosystem; services handled partner onboarding, catalog management, and order processing.
- Containerized all services with Docker and deployed via Kubernetes, enabling zero-downtime rolling updates and auto-scaling to handle variable partner traffic.
- Built cross-platform SDKs (Swift for iOS, Java for Android) to streamline third-party partner integrations, reducing partner onboarding time and support overhead.
- Set up CI/CD pipelines using GitHub Actions and Bitbucket Pipelines, cutting manual deployment steps and standardizing release processes across the team.

3. SoftPOS — PCI-Compliant Mobile Payment System

- Designed PCI-DSS-compliant payment backend in Go covering authorization, reconciliation, settlement, and device provisioning for mobile SoftPOS terminals.
- Implemented NFC Tap & Pay on Android using Kotlin/Java with Host Card Emulation (HCE), supporting live RuPay card-present transactions on certified mobile devices.
- Built secure card transaction flows with end-to-end encryption, ensuring data integrity and compliance for card-present payments on mobile devices.

EDUCATION

B.E. - Computer Science and Engineering

2020 – 2024 | India

Anna University

SKILLS

Core Languages

Go (Golang) · Java · Python · Kotlin · Swift · JavaScript

Backend

Spring Boot · REST APIs · gRPC · Microservices · Apache Kafka · Redis · Event-Driven Architecture · Concurrent Programming

Frontend

React.js · Angular

Databases

PostgreSQL · MySQL · MongoDB · OracleDB · SQLite

DevOps & Cloud

Docker · Kubernetes · CI/CD (GitHub Actions, Bitbucket Pipelines) · Git

Mobile

iOS (UIKit, SwiftUI, Objective-C) · Android (Java, Kotlin) · Flutter
